(The big story missions are unlocked on easy, and you can play all easy and normal missions). After the unlocking, you can chose the difficulty of the missions to be easy, normal or hard You just go in the mission page, click on the start mission button and you can play all missions of all difficulties. (Tip: The difficulties are not saved) You are right that you can change the difficulty of the missions later, but the change will reset all your progress. After the last round of presentations, the panel discussion began. The initial question is always: are we talking about LAs yet? And no, we are not. The question was: will this move to LAs affect the number of large general surgery-focused hospitals? And the answer was an unequivocal "no". As Dr. Spencer pointed out: "If you want to be a big general surgery hospital, you will always be one." The LA model is not designed for big institutions. Is the LA model a good idea for smaller hospitals? No. The beauty of the original general surgery model was that the system was designed to provide high-quality care for everyone. While the same could be said about orthopedics, neurosurgery and pediatric surgery, the LA model is completely different. These models were designed with big hospitals in mind. The LA model is designed for hospitals that have between 100 and 400 beds. The reason for this is that the hospitals will no longer have to spend as much money on operating rooms, and so many of them will not have to have their own (but will instead share rooms). Unfortunately, this means that smaller hospitals, with their small beds, are the ones that will be the most at risk. But it is not the case that LAs are bad and small hospitals are good, it is just that the models are different. The LA model is being touted as an improvement. This, however, is not necessarily true. It is true that the LAs are better organized and more efficient. This is not a bad thing. A large hospital that does not have a designated orthopedic surgeon, or a large hospital with a "heart hospital" that does not have a cardiac surgeon is the same as a small hospital that does not have a general surgeon. However, it is difficult to predict what will happen in the future and how it will affect the system as a whole. In the end, this will be something that will need to 82157476af
